The Honorable Scott Pruitt
Administrator
U.S. Environmental Protection Agency
Washington, DC 20460

Dear Administrator Pruitt:

The undersigned water and wastewater industry organizations urge you to fund the Office of Water's Water Security Division (WSD) in FY18 at the FY17 enacted level of \$10.2 million.

We believe the administration's FY18 budget plan, which proposes eliminating funding for WSD, is highly problematic. Such a move would terminate the critical non-regulatory resources produced by WSD, and would only provide minimal resources for EPA to fulfill its responsibilities as a Sector Specific Agency under Presidential Policy Directive 21 (PPD-21).

There are nearly 53,000 drinking water systems and 16,000 wastewater systems serving American communities nationwide. Each year thousands of these systems rely on the tools, training, workshops and educational guides produced by WSD. These non-regulatory knowledge resources help utilities protect critical water and wastewater infrastructure from terrorism, cyber attacks and natural disasters and recover from incidents and emergencies.

The impacts of Hurricanes Harvey, Irma and Maria underscore the importance of a resilient water and wastewater sector and, by extension, the value of WSD's products and support. For example, WSD has worked with the sector and local response agencies to develop exercises that help utilities test and strengthen their emergency response plans. WSD, in collaboration with the sector, has also hosted workshops across the country on power resilience, emergency response and management, mutual aid agreements, and interdependencies with other critical sectors. These free events and other WSD activities improved the ability of utilities to plan for and respond to impacts from the recent hurricanes.

However, if the administration's proposal to defund WSD is implemented, the highly effective workshops and trainings, updates to its electronic assessment tools, investments in much-needed work on decontamination and contamination response, and other contributions to sector preparedness would cease.

Security and preparedness against physical and cyber threats and natural disasters require our sector and state and federal partners to work together. Continuing a stable funding level of \$10.2 million for EPA's Water Security Division is an extremely worthwhile and solid investment.

We hope you will ensure that FY17 enacted funding is maintained through FY18.

Thank you for your consideration.

Sincerely,

Diane VanDe Hei
