Support for the Advancing Water Reuse Act (H.R. 2940)

The undersigned entities support the Advancing Water Reuse Act (H.R. 2940), which is being led in the House by Representatives Darin LaHood (R-IL), Claudia Tenney (R-NY), Brad Schneider (D-IL), and Linda Sanchez (D-CA). H.R. 2940 would establish a 30 percent tax credit to help manufacturers and other industrial entities scale up their use of recycled water in lieu of other freshwater resources.

Industrial water use in the US is second only to that of agriculture, and current industrial water reuse offsets only a fraction of industrial water usage. The *Advancing Water Reuse Act* will help ensure that businesses have long-term, reliable water supplies and that community water resources are protected. Industrial water reuse is an effective and efficient process for treating water to meet specific quality standards for an intended end use. This water can originate in the same facility that captures, treats, and reuses it, which is known as onsite reuse; or, it can be supplied through a public-private partnership by which municipalities provide treated recycled water to industry.

By incentivizing investments in water reuse, the *Advancing Water Reuse Act* will help protect water quality by limiting discharges of industrial effluent, reduce demand on freshwater supplies, and catalyze business development and job growth. We urge Congress to establish an industrial water reuse investment tax credit by enacting H.R. 2940.
